Question What are the key mechanisms involved in the pathophysiology of hypertension as discussed in 'Pathophysiology for the Health Professions 3e'? The book explains that hypertension results from complex interactions between genetic factors, vascular remodeling, increased sympathetic activity, and hormonal regulation (such as the renin-angiotensin-aldosterone system), leading to increased peripheral resistance and elevated blood pressure. How does 'Pathophysiology for the Health Professions 3e' describe the pathogenesis of diabetes mellitus? It describes diabetes mellitus as resulting from either absolute insulin deficiency (Type 1) due to autoimmune destruction of pancreatic beta cells, or insulin resistance combined with relative insulin deficiency (Type 2), leading to impaired glucose uptake and hyperglycemia. According to 'Pathophysiology for the Health Professions 3e', what are the major pathophysiological changes in

chronic obstructive pulmonary disease (COPD)? The book highlights airflow limitation caused by airway inflammation, mucus hypersecretion, and parenchymal destruction (emphysema), along with abnormal inflammatory responses to noxious particles or gases, resulting in impaired gas exchange and airflow obstruction. What does 'Pathophysiology for the Health Professions 3e' identify as the primary cause of myocardial infarction? The primary cause is usually the rupture of an atherosclerotic plaque in coronary arteries, leading to thrombus formation and complete occlusion of the vessel, resulting in ischemia and necrosis of heart tissue. How does 'Pathophysiology for the Health Professions 3e' explain the development of acute kidney injury (AKI)? AKI develops due to sudden decline in renal function caused by factors such as ischemia, toxins, or obstruction, leading to decreased glomerular filtration rate, accumulation of waste products, and impaired fluid and electrolyte balance.
