- Humerus: The long bone of the arm, articulating proximally with the scapula and distally with the radius and ulna.
- Radius and Ulna: The two bones of the forearm, with the radius primarily involved in wrist movements and the ulna forming the elbow joint.

Muscular Components

Muscles are organized into compartments based on their innervation and function:

- Anterior (Flexor) compartment: Includes muscles like biceps brachii, brachialis, and coracobrachialis.
- Posterior (Extensor) compartment: Contains triceps brachii and extensor muscles of the forearm.
- Thenar and hypothenar muscles: Innervated by median and ulnar nerves, responsible for thumb and little finger movements.

Nervous Innervation

The nerve supply to the upper limb is intricate:

- Brachial plexus: The main network supplying nerves, formed by spinal roots C5-T1.
- Major nerves: Axillary, musculocutaneous, median, ulnar, and radial nerves.
- Clinical relevance: Injury to these nerves results in characteristic motor and sensory deficits.

Vascular Supply

- Subclavian artery becomes axillary artery, then brachial artery, supplying the arm.
