Introduction to Class Diagrams in Movie Ticket Booking Systems

A class diagram is a type of UML (Unified Modeling Language) diagram that depicts the classes within a system, their attributes, methods, and relationships. In a movie ticket booking system, the

class diagram serves as a blueprint that models the core components involved in the process of selecting a movie, booking tickets, managing user accounts, and handling payments.

Designing a class diagram involves identifying the main entities involved, their relevant properties, and how they connect. This visual representation helps in spotting potential issues early, optimizing the system architecture, and ensuring all business rules are correctly encoded.

Key Components of a Movie Ticket Booking System Class Diagram

When constructing a class diagram for a movie ticket booking system, several core classes emerge as essential. These classes can be grouped into categories such as Users, Movies, Theaters, Showtimes, Tickets, Payments, and Administrative functions.

- Users

Users are the primary actors in the system, whether they are regular customers or administrators.

- Customer: The end-user who browses movies, selects seats, and makes bookings.
- Admin: Responsible for managing movies, showtimes, theaters, and other system configurations.

- Movie and Show-related Classes

These classes handle the information about films and their scheduled showings.

- Movie: Contains details about the film, such as title, genre, duration, language, and ratings.
- Theater: Represents the physical location where movies are screened, including attributes like name, address, and seating capacity.
