- A) Learning through rewards and punishments
- B) Learning through association between stimuli
- C) Learning by observing others
- D) Learning through insight and reasoning

Answer: B) Learning through association between stimuli

Explanation: Classical conditioning, pioneered by Pavlov, involves learning to associate a neutral stimulus with an unconditioned stimulus to produce a conditioned response.

True/False Questions

These assess understanding of factual statements.

Example:

Memory retrieval is always an accurate process.

Answer: False

Explanation: Memory retrieval can be influenced by various factors and is susceptible to distortions, making it not always accurate.

Short Answer Questions
