In this article, we will systematically unpack the key topics covered in this unit, providing clarity and detail suitable for readers seeking both an overview and an in-depth understanding of human biology as outlined in the June 2014 curriculum.

The Human Nervous System: The Body's Control Center

Structure and Function of the Nervous System

The human nervous system is an intricate network that coordinates voluntary and involuntary actions, allowing humans to perceive, interpret, and respond to their environment. It comprises two main parts:

- Central Nervous System (CNS): Consists of the brain and spinal cord; acts as the processing center.
- Peripheral Nervous System (PNS): Includes all nerves outside the CNS; connects the CNS to limbs and organs.

Within the PNS, the nervous system is further divided into:

- Somatic Nervous System: Controls voluntary movements and reflexes.
- Autonomic Nervous System: Regulates involuntary functions such as heartbeat, digestion, and respiratory rate.

Neurons: The Building Blocks

Neurons are specialized nerve cells that transmit electrical impulses. They have three main parts:

- Dendrites: Receive signals from other neurons.
- Cell Body: Processes incoming signals.
- Axon: Transmits impulses to other neurons or effectors.

How Nerve Impulses Work

The process involves:

- Resting Potential: The neuron maintains a negative charge inside relative to outside.
- Stimulus Reception: When stimulated, sodium channels open, allowing sodium ions to enter.
- Depolarization: The change in electrical charge propagates along the axon.
- Repolarization: Potassium ions exit, restoring the resting potential.
- Transmission of Signal: The impulse reaches the synapse, where neurotransmitters facilitate communication to the next neuron or effector.

Circulatory System: Transporting Life's Essentials

The Heart: The Pump of the Body

The human heart is a muscular organ approximately the size of a fist, divided into four chambers:

- Atria: Receive blood returning to the heart.
- Ventricles: Pump blood out to the lungs and body.

The heart's rhythmic contractions are controlled by electrical signals, ensuring continuous circulation.

Blood Vessels: The Body's Highway
