Sample Questions from AQA IGCSE Biology Paper 2 2014

Including sample questions helps illustrate the exam's scope and style.

Sample Question 1: Cell Structure

Describe the differences between plant and animal cells, including at least three features.

Sample Answer:

Plant cells have a cell wall, chloroplasts, and a large central vacuole, which are absent in animal cells. Animal cells lack cell walls and chloroplasts but have centrioles involved in cell division.

Sample Question 2: Data Analysis

The graph shows the rate of photosynthesis at different light intensities. Explain how light intensity affects photosynthesis and describe what the graph indicates.

Sample Answer:

As light intensity increases, the rate of photosynthesis initially increases because more light energy is available for the process. The graph shows a rapid rise in rate at low intensities, then levels off at higher intensities, indicating a saturation point where other factors limit photosynthesis.

Sample Question 3: Practical Design

Design an experiment to investigate how temperature affects enzyme activity. Include the variables, controls, and method.

Sample Answer:

Variables:

- Independent: Temperature
- Dependent: Rate of enzyme activity
- Control: pH, enzyme concentration, substrate concentration

Method:

- Prepare identical enzyme solutions.
- Incubate samples at different temperatures (e.g., 10°C, 20°C, 30°C, 40°C).
- Add substrate and measure product formation over time.
- Record and compare the rates to determine optimal temperature.
